About Us

Engineered Handling, a material handling solutions company headquartered in Charlotte, North Carolina, offers superior products and services to the distribution, logistics, and manufacturing sectors. The mission of Engineered Handling is to exceed the expectations of our customers, employees, and suppliers. Today's competitive environment demands the most effective distribution equipment and systems available. Our Company has successfully served our market place with a combined experience level of over 100 years. You can count on us to deliver the best products and services at competitive prices.

Installation

Our installers are employees of Engineered Handling and are fully trained and insured. We practice a safety first mentality and follow OSHA guidelines. We install material handling systems including all type of pallet racking systems, mezzanines, shelving, modular offices, conveyors, bridge and jib cranes, lockers, dock equipment, and wire partitions. As a licensed General Contractor, we can permit your projects when it is required. We can also subcontract sprinklers and lighting and include those items in the permitting process. Whether you're looking for a simple installation, a bundling of services, or a turnkey project, we are the experts you need to install your material handling system.

Relocation & Liquidation Services

If you're looking to relocate or sell some, or all of your warehouse equipment, Engineered Handling can aide you in that process. We have completed many relocation projects where our customers have re-used some of their existing equipment, added new components, and sold us the remaining components that no longer were useful in their application. In addition, we can coordinate moving inventory between locations. If you are completely liquidating, Engineered Handling will remove equipment from your facility and buy or broker the sale of the assets.
